

Primary school Rokytnice in Vsetín was established in 1979. We will celebrate 30. anniversary our school this year. We were typical for the extended education of math and natural science for years. With an activation of ŠVP (School Educational Programme) we are interested in three specific sections which can differentiate our school from the others.

Information and communication technology

The school disposes of two IT classrooms with internet and with other digital technics (scanner, dataprojector, digital camera). Thanks of new extended IT education we can offer to our pupils:

- Extended IT education about 3 hours
- Knowledge of wide spectrum of universal ICT skills
- Essentials of typing
- Work with a text editor and rules of the correct data editing
- Work with a digital technics anf graphics editor
- Creation of the multimedia presentation
- Using of the spreadsheet processor
- E – learning education
- Html language education and essentials of the algorithm development
- Using of the educational computer programmes in all subjects

Science subjects and environmental education

We have got an extended education of these subjects - thanks of our directivity and ŠVP, too. Our pupils practise their skills in laboratory works or in project activities. Our school works successfully in EVVO for years, mainly in projects with natural science theme. We can offer to our pupils:

- Laboratory works (natural science, physics, chemistry)
- Subject olympiades
- Participation in national and international projects (GLOBE, Karbon Cycle, Acid rains, Eratosthenes, ENO and so on) – our school achieved an important national and international success in past.
- EVVO blends together wide subject spectrum

Education of foreign languages

Our other priority is language education. Pupils have got English lessons from the 3rd class according to a new school educational programme. Pupils can choose second foreign language - German in the 7th class.

- English lessons from the 3rd to the 9th class
- Elective subject – the second foreign language from the 7th class
- If pupil doesn't choose second language, he has got 1 other English lesson for a week

Our school has got 355 pupils in 18 classrooms currently. We have got 44 permanent employees and 32 of them are pedagogical employees. There are 18 classrooms, 2 IT classrooms, special classroom for natural science and geography, physics and chemistry, classroom for musical appreciation, relaxation room, 2 gyms, 3 departments of public nursery and clubroom of the school club. We would like to have some special classroom for foreign languages and ceramic workroom in the future. We use school garden and school ground for the education, too.

Sports and other school activities

Primary school Rokytnice has got 2 reconstructed gyms including social settlement (pupils can have a shower after PE).

Activities for the first stage:

- Essentials of programming
- Sports game
- Mini – aerobic
- Flute
- Swimming
- Judo
- „Všeználek“ – improve your knowledge

Activities for the second stage:

- Computers
- Floorball league
- Basketball
- Judo
